

# LA CONSTRUCTION DES DOUVES

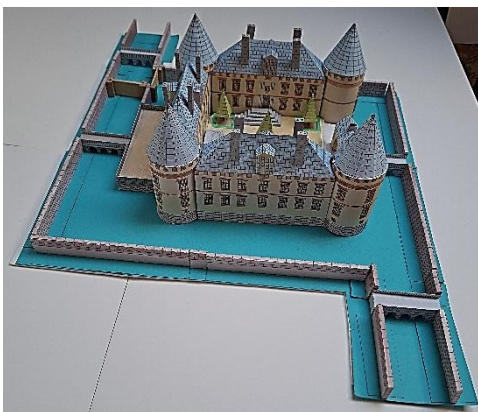

**Les douves sont des fossés remplis d'eau, ces fossés sont entourés de murs.**

**Le château est bâti non loin d'une rivière. Des vannes permettent de surveiller le débit de l'eau.**

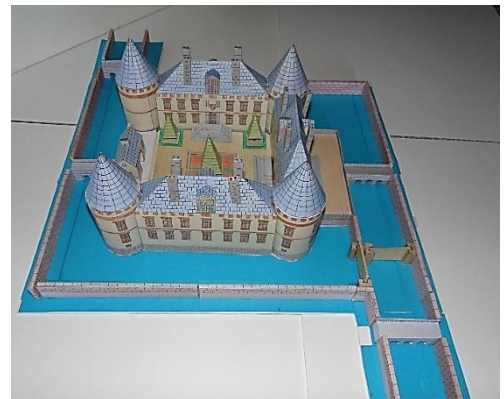

**Les jours de beau temps, le château se reflète dans l'eau. C'est un beau spectacle.**

## CONSEILS : commencer par les murs

Commencer par préparer une grande surface avec du papier bleu épais (à poser éventuellement sur un carton... plume) en respectant les cotes indiquées page précédente.

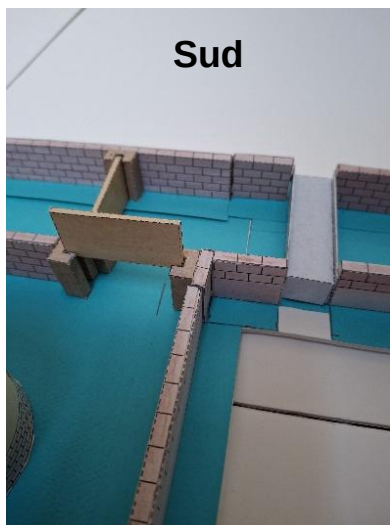

Placer les murs comme ci-dessus, puis les ponts et les vannes.

Les développements des différents éléments à construire, vous sont proposés pages suivantes.
