

LE JARDIN GEOMETRIQUE

Le jardin géométrique que nous vous proposons est composé de :

- ❖ 6 parcelles carrées où poussent des plantes de diverses couleurs
- ❖ 3 espaces de buis taillés (en topiaire)
- ❖ 1 labyrinthe

Notre jardin géométrique repose sur une surface de carton plume recouverte de papier dessin vert d'une surface de 54 cm x 36 cm.

Pour que la maquette se trouve au niveau de la cour du château et des ponts, on ajustera des renforts sous le carton plume.

Le labyrinthe

Carrés décoratifs de différentes variétés de plantes colorées et fleurs

Les massifs de buis

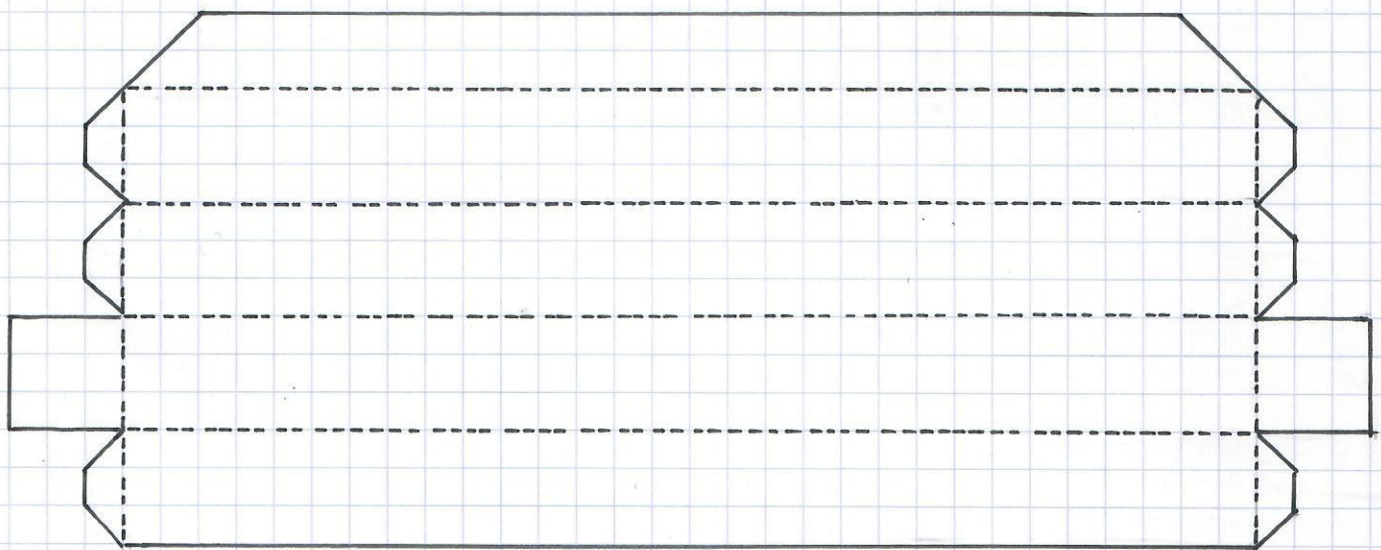

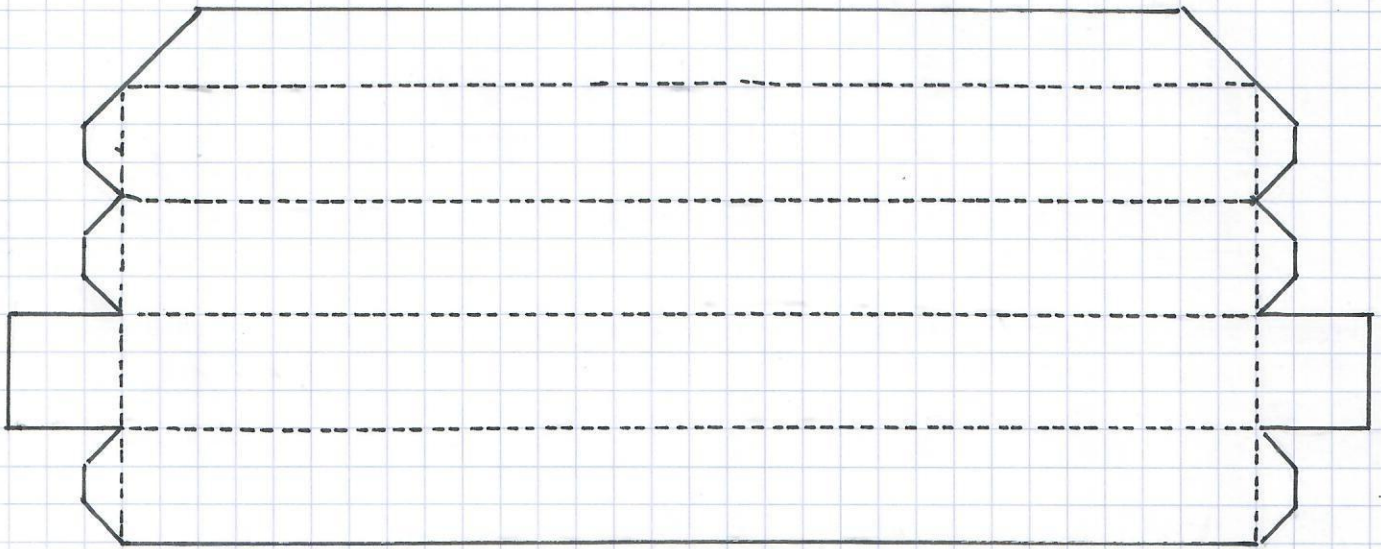

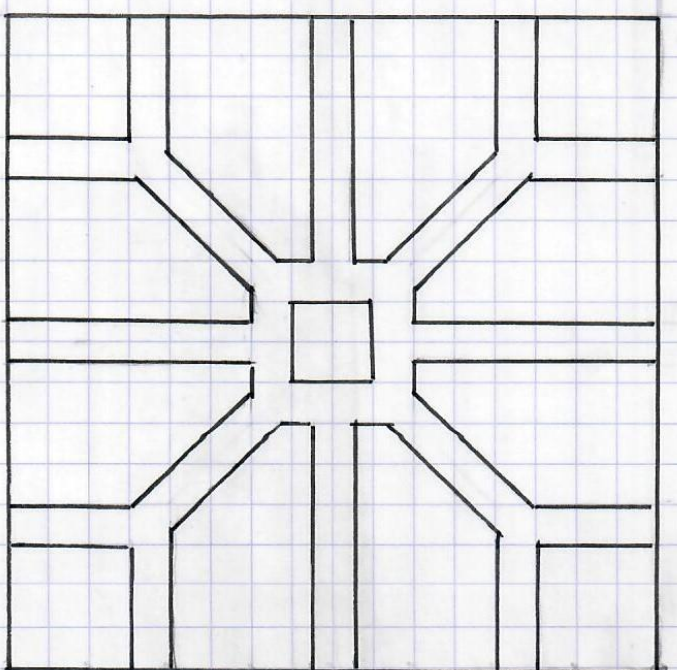

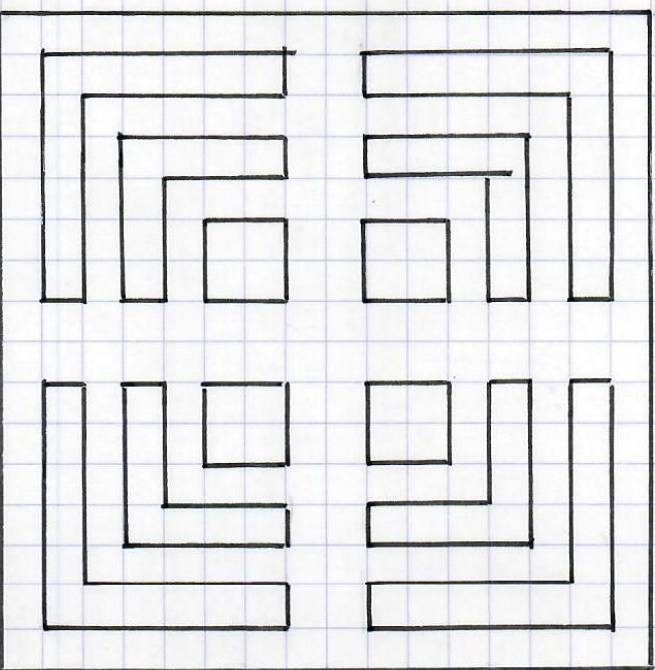

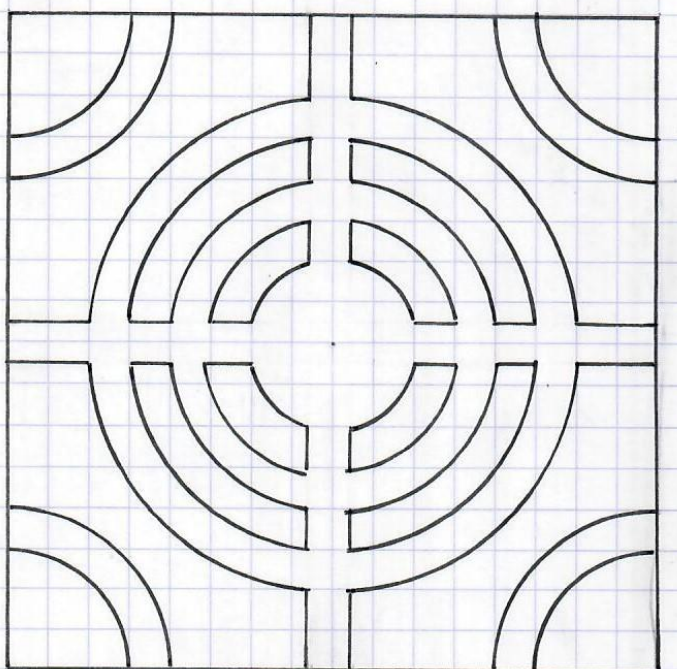

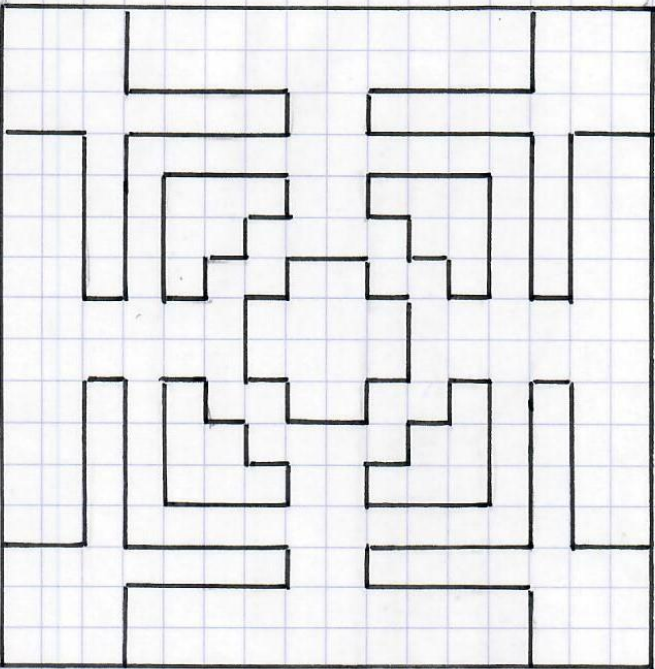

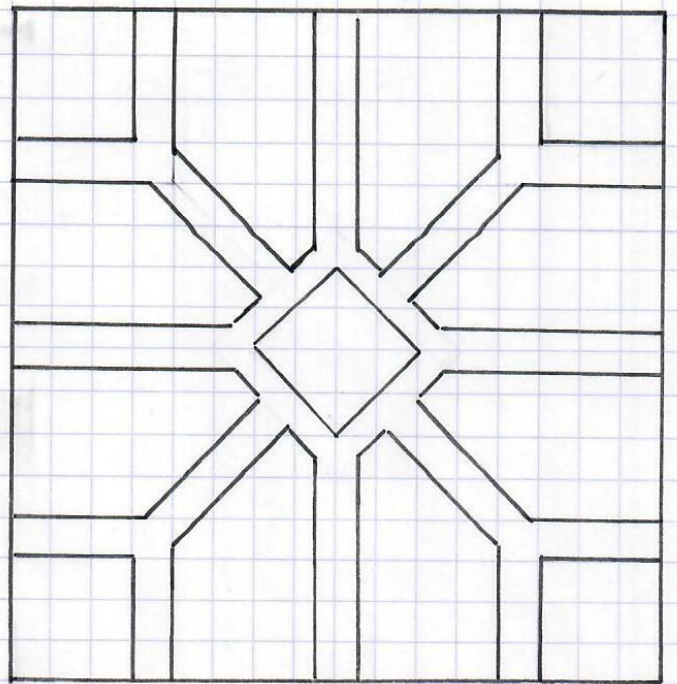

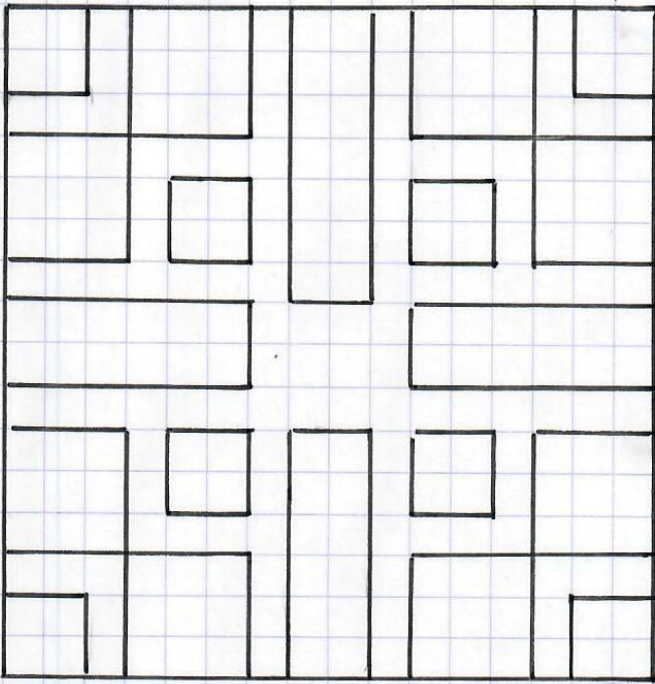

La Nature est maîtrisée ! ... On se promène au cœur de la géométrie, des labyrinthes.

On peut inventer sans cesse de nouvelles formes géométriques... les rois de France et les nobles (grâce à leurs jardiniers) ne vont pas s'en priver.

Observez les châteaux de la Loire, le château de Villandry...

Ces volumes seront à placer sous la surface de carton plume qui servira de support au jardin géométrique afin de le surélever à hauteur du château.

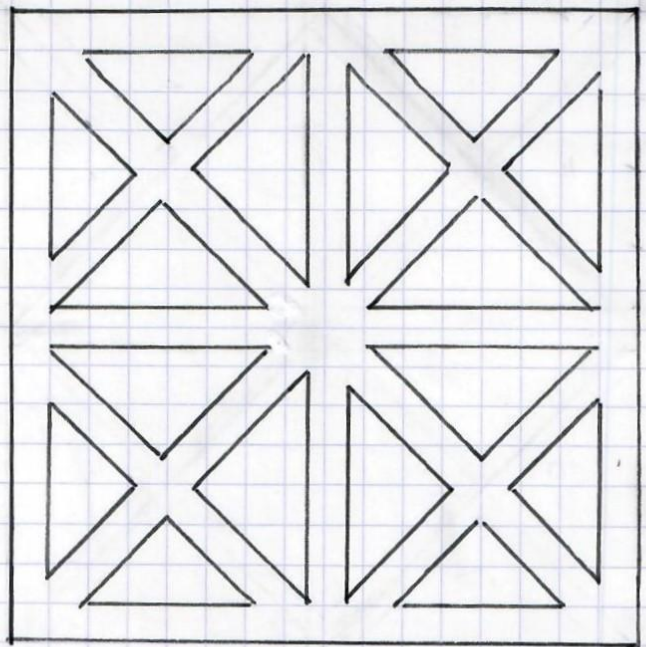

LES MASSIFS DE BUIS

Vous allez devoir fabriquer des petits volumes en vous servant des développements que vous trouverez dans les pages suivantes.

A :

8 volumes-triangle de
« grande taille »

8 volumes-triangle
plus petits

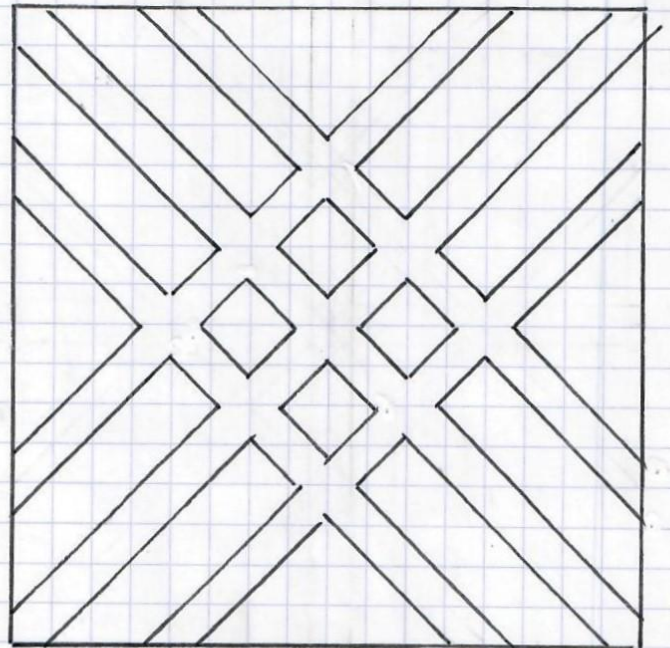

B :

4 petits plots carrés
au centre

4 volumes-triangle

8 trapèzes

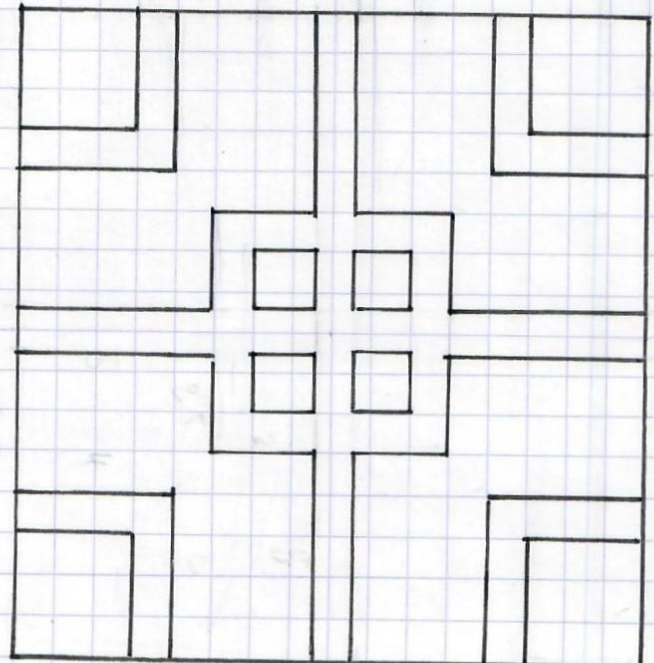

C :

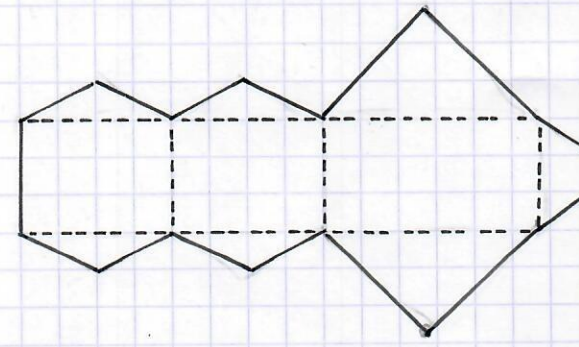

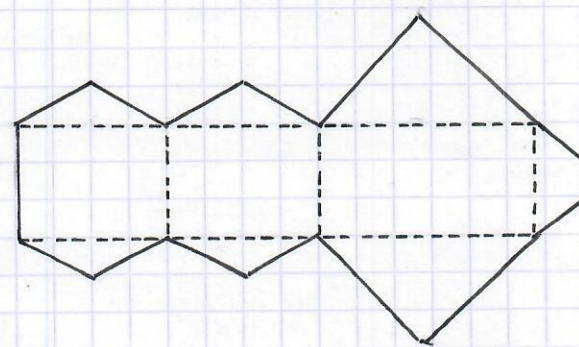

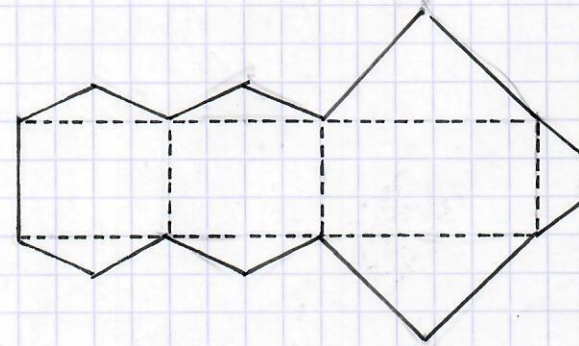

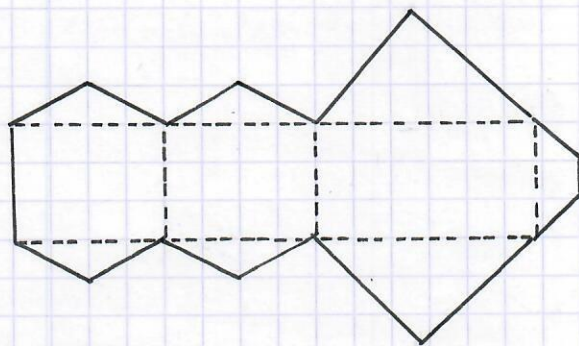

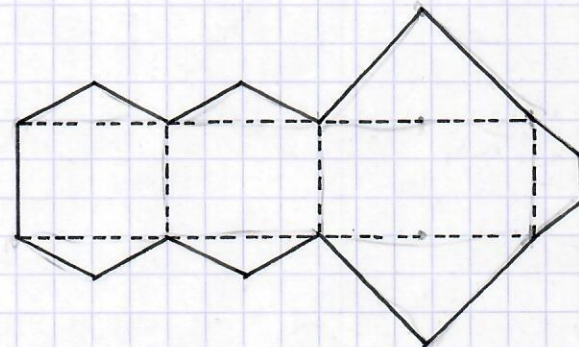

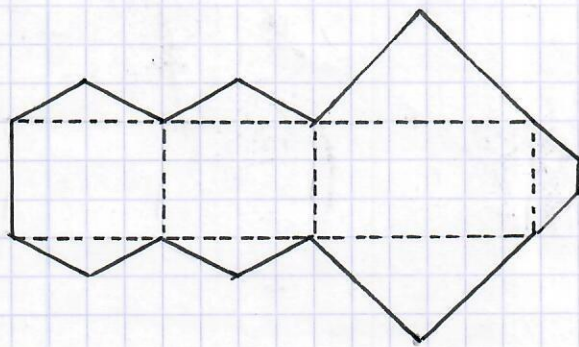

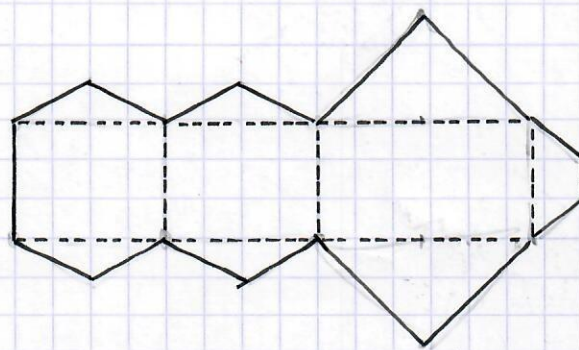

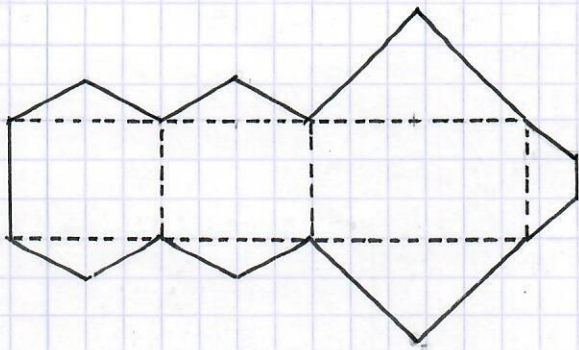

4 gros cubes

4 plots au centre

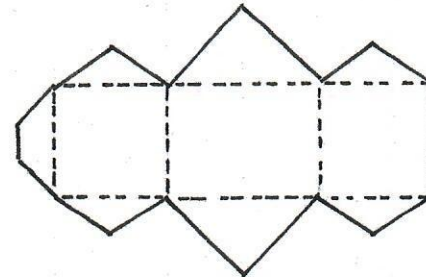

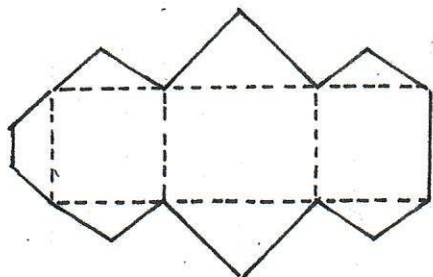

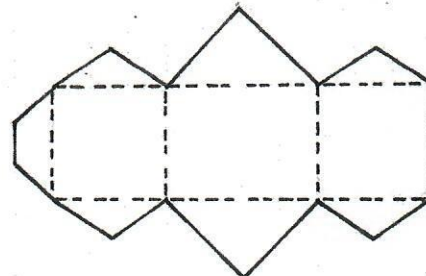

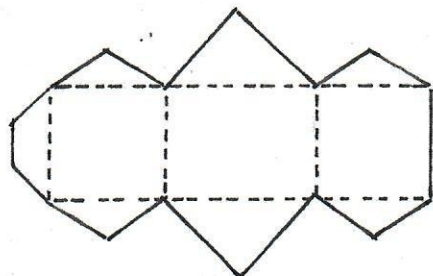

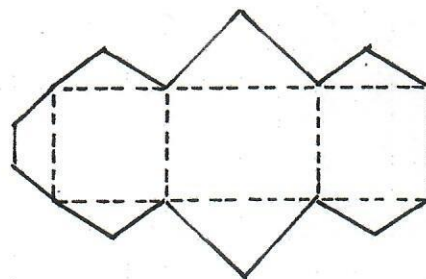

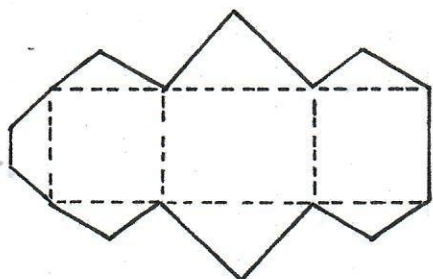

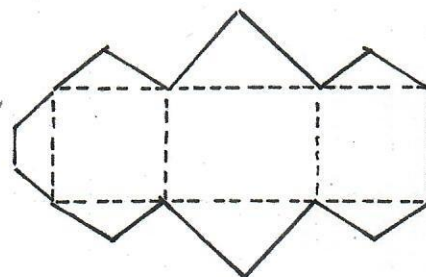

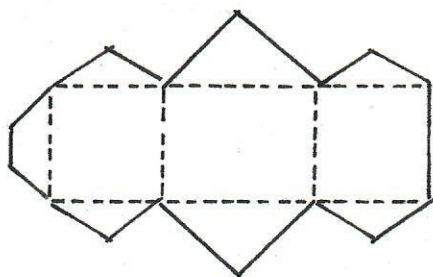

4 formes complexes

LE LABYRINTHE

Rappel : Sur notre site « dessins-découpages », on peut consulter le dossier « labyrinthe » en cliquant sur la bande bleue puis sur l'onglet « tracés » et « labyrinthes, nœuds routiers ».

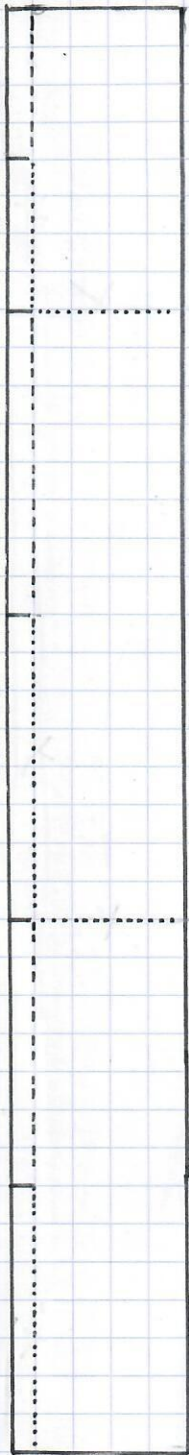

Les parois du labyrinthe sont réalisées avec du bristol blanc uni.

Il faut monter les parois à partir du centre (1) puis suivre la numérotation.

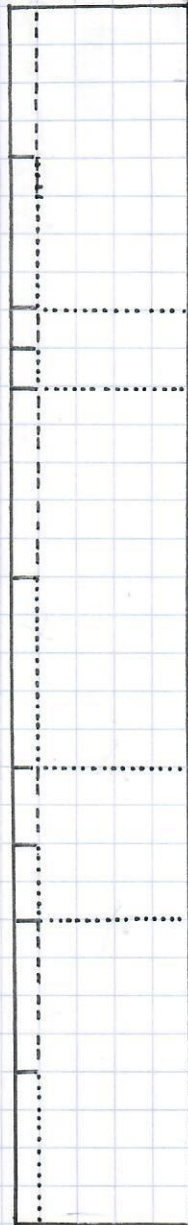

Nous avons mis des couleurs sur le plan pour faciliter la tâche de construction.

Nos murs ne sont pas des volumes mais de simples parois dont il faut colorier les deux faces (avec ou sans nos couleurs).

Trouvez les développements pages suivantes.
